Your Total Solutions Provider
Our commitment is to provide the latest technology, quality products and technical expertise to meet the ever-changing requirements of the power industry. With the capabilities of supplying diesel and natural gas powered systems combined with unequalled product support, MacAllister Power Systems can meet any of your power requirements.

Our strength is our experienced sales team that can provide customized engineering solutions tailored to meet the objectives of our customers.

**Back Up Electric Power Generation**

MacAllister carries a full range of Caterpillar® generator sets for all your power generation needs from Cogeneration to Prime Power to Standby Power. Our design engineers can work with you to design the installation that best fits your requirements. Plus MacAllister can provide installation, testing, and service support for all equipment.

**Power Quality Products**

**Automatic Transfer Switches**

MacAllister provides a full range of automatic transfer switches, both open and closed transition, service entrance rated and bypass isolation from several manufacturers. Transfer switches are available in voltages from 120 volts - 15 KV in various enclosures.

**Uninterruptible Power Supply (UPS)**

Reliable electric power is essential when you expect trouble-free uninterrupted service. We understand that power quality issues and interruptions can cost you money and downtime. To prevent such occurrences, MacAllister offers both battery and rotary Uninterruptible Power Supply (UPS) systems.
Experienced Field Technicians

When you need a scheduled or emergency repair, our experienced technicians are at your service 24 hours a day, 7 days a week. MacAllister has over 25 technicians exceeding 250 years total experience that provide unequaled expertise and response.

Customer Support Agreements

No matter what service requirements you may have, MacAllister can tailor a Customer Support Agreement to help you better plan and control your operating costs. MacAllister Customer Support Agreement options include periodic inspections, load bank testing, oil change, coolant flush, and fuel cleaning.

Competitive Equipment

Did you know that MacAllister services all makes and models of equipment to include Cummins®, Kohler®, Detroit®, Katolight®, Generac™, Baldor® and many others.

Inspection and Testing Programs

An assortment of options are available to determine the health of your power system. Beyond just a simple inspection, our technicians will help you head off problems before they occur. Some alternatives include:

- Engine & Generator Inspections: Careful evaluation and reporting of your entire prime product.
- Automatic Transfer Switch Inspections: Assess the overall condition of your ATS.
- Load Bank Testing: Performed in two or four hour increments. Includes detailed test results recorded every fifteen minutes of the overall performance on your equipment.
- Uninterruptible Power Service: (UPS) Evaluate the condition of your UPS system.
- Fuel Cleaning: Removes contaminates in day tanks and main storage tanks reducing operating cost and reducing fuel consumption.

Repair Options

A multitude of solutions will be offered if our inspection detects a condition with your equipment that requires immediate or future attention.

Fluid Analysis

Fluid Analysis is a critical component of a cost-effective fleet management program. Here are just a few of the benefits of fluid analysis which include; oil, coolant, and fuel:

- Detects problems early
- Helps schedule downtime
- Monitors positive/negative results
- Allows monitoring of maintenance schedules
- Better manage budgets
- Develop a complete service history

Reporting and Documentation

We will provide an entire system evaluation after every inspection and retain historical data should your reports get lost or misplaced. Reports will be provided after each service and, you have the option to receive your reports electronically.
MacAllister Power Systems delivers the power you demand—with one call. Whether you have a planned shutdown, construction site, utility support, or special event requiring temporary power, temperature control equipment or compressed air, we have your solution. MacAllister maintains a comprehensive fleet of rental generators, chillers and air conditioners, oil free air compressors, electrical load banks and ancillary products to help meet your planned or emergency requirements.

Emergency Power

When you need dependable portable electric power in a hurry, count on MacAllister Power Systems. We supply sound attenuated diesel generators for virtually any requirement from 20kW to 2000kW and beyond. We are ready when you are, wherever you are, to meet the most demanding requirements. Prime Power or Standby Emergency Power. With a North American network second to none, MacAllister delivers the power you need, where you need it, when you need it.

Temperature Control

With a large fleet of chillers, air conditioners, heaters, dehumidifiers, and cooling towers, MacAllister will assist you with the proper design and installation services for your event or special need.

Compressed Air

MacAllister Power Systems rents oil-free air compressors ranging from 750 CFM to 1600 CFM. Whether the need is a mobile compressor or an application requiring high quality, high CFM, and high PSI, MacAllister can assist you. And best of all, these units are backed by MacAllister’s product support team.

Solutions

MacAllister is uniquely equipped to be your single-source, turnkey operation capable of meeting your rental power and temperature control needs. MacAllister’s extensive rental fleet is the largest in Indiana. Our technical expertise and 24-Hour support make customers feel secure about choosing us. That’s why MacAllister is chosen to support some of Indiana’s premier events and projects.
